Backend Software Engineer

Backend engineer with 10+ years of software development experience, focused on Go, Python, and C#/.NET. Hands-on background in distributed systems, REST APIs, event-driven integration, enterprise platforms, and modernization of legacy systems. Delivered backend solutions in e-commerce logistics, fintech, and ERP environments. Interested in hands-on backend engineering roles with internationally distributed teams.

Technical Skills

- **Languages & Frameworks:** Go (Golang), Python (Flask, FastAPI, Django), C#/.NET, Java, SQL, Bash
- **Backend & Architecture:** REST APIs, Microservices, Event-Driven Systems, System Integration, Background Workers, Unit and Integration Testing
- **Infrastructure & Cloud:** Linux, Docker, Kubernetes, Microsoft Azure, Google Cloud Platform (GCP), CI/CD
- **Databases:** PostgreSQL, SQL Server, MySQL, MariaDB, SQLite, Oracle
- **Languages Spoken:** Portuguese (native); English (technical reading, writing, and communication)

Professional Experience

Senior Software Engineer — **WK Sistemas** — *Blumenau, Brazil (Hybrid)* — **11/2025 – 08/2026**

WK Sistemas provides enterprise ERP and management solutions for businesses.

- Developed APIs and background workers in Go and .NET/C# to integrate enterprise ERP data with internal and third-party services.
- Built reusable core components and packages for the company's official SDK, supporting development of new platform applications.
- Contributed to foundational platform services supporting AI-oriented workflows across the ERP ecosystem.

Technologies: Go, C#/.NET, Azure, REST APIs, Background Workers.

Senior Software Engineer — **Mercado Livre** — *Florianópolis, Brazil (Remote/Hybrid)* — **08/2024 – 09/2025**

Mercado Livre is the leading e-commerce and fintech ecosystem in Latin America.

- Contributed as part of a larger engineering team to **Go** and **Java** services supporting fiscal invoice orchestration for fulfillment operations in Brazil, Chile, and Peru.
- Worked across fiscal workflows for seller inbound, sales, distribution-center transfers, returns, and inventory losses, in an operation issuing over **200,000 invoices per hour**. This figure reflects the broader operation, not individual service throughput.
- Built reusable mock libraries and specialized routing components to simplify development and testing.
- Identified and remediated code vulnerabilities and contributed to technology modernization and knowledge sharing.

Technologies: Go, Java, Microservices, REST APIs.

Senior Software Engineer — **Levva** — *Campinas, Brazil (Remote)* — **01/2024 – 08/2024**

Levva is a software development consultancy focused on tailored digital solutions.

- Implemented contingency and data consolidation mechanisms for the Jeitto fintech platform, supporting data integrity and service availability.
- Diagnosed a billing processing failure, implemented a hotfix, and monitored consolidation scripts through recovery; the reconciliation system processed over 300,000 invoices overnight.
- Automated parts of financial collections workflows to reduce manual intervention.
- Integrated back-office systems, core-banking platforms, and internal services using Python.

Technologies: Python, Flask, Apache Airflow, Google Cloud Platform.

Senior Software Engineer **AmbevTech** *Blumenau, Brazil (Hybrid)* **08/2019 – 01/2024**

AmbevTech is the technology hub for AB InBev / Ambev, focusing on digital transformation and logistics.

- Implemented event-driven data integration services using Python and C# to distribute data from a legacy COBOL ERP to modern consumers.
- Developed schema validation and domain-based event routing, supporting delivery to APIs, message queues, and object storage.
- Demonstrated processing throughput of approximately 90,000 events in five minutes in a development environment; this is not a production throughput claim.
- Built CLI tools to streamline internal engineering workflows and delivered C# training for engineers transitioning from COBOL systems.
- Contributed to build and deployment automation in Microsoft Azure and presented legacy modernization work at the Python Sul conference.

Technologies: Python, Flask, FastAPI, C#/.NET, Azure, Docker, SQL Server, PostgreSQL, Event-Driven Systems.

Software Developer **Philips** *Blumenau, Brazil (On-site)* **03/2019 – 08/2019**

Philips Healthcare delivers clinical and administrative health management software (Tasy).

- Maintained and extended the Tasy healthcare software, implementing features and bug fixes for the healthcare operators module.

Technologies: Oracle PL/SQL, Java, JavaScript, Delphi.

Software Developer **Time Informática** *Blumenau, Brazil (On-site)* **09/2012 – 03/2019**

Time Informática develops commercial ERP, fiscal, and operational software for businesses.

- Developed and maintained commercial ERP systems, fiscal applications, and operational desktop tools.
- Managed application servers and built internal licensing and telemetry tools to support operations and troubleshooting.

Technologies: Visual FoxPro, Lazarus/FPC, PHP, Python, Linux, MySQL/MariaDB.

Selected Project

- **Escoteirando Suite** — GitHub: Work-in-progress suite of applications for Brazilian scouting, integrating identity and tools for group management and activity planning.

Education

- Bachelor's Degree in Software Engineering — UniCesumar (2016–2020)
- Postgraduate Degree in Data Science & Big Data Analytics — Faculdade Metropolitana (2020)

Community & Professional Development

- Speaker at Python Sul (2022): "Data Extraction from Monoliths to Microservices"; delivered Python courses and internal C# training.
- Selected coursework: Ultimate Go Programming (O'Reilly); Software Architecture Fundamentals; Python: Advanced Design Patterns.
